

JS8Map Instructional Guide Ver1.55

See “JS8Map Installation & First Run Guide” for install instructions

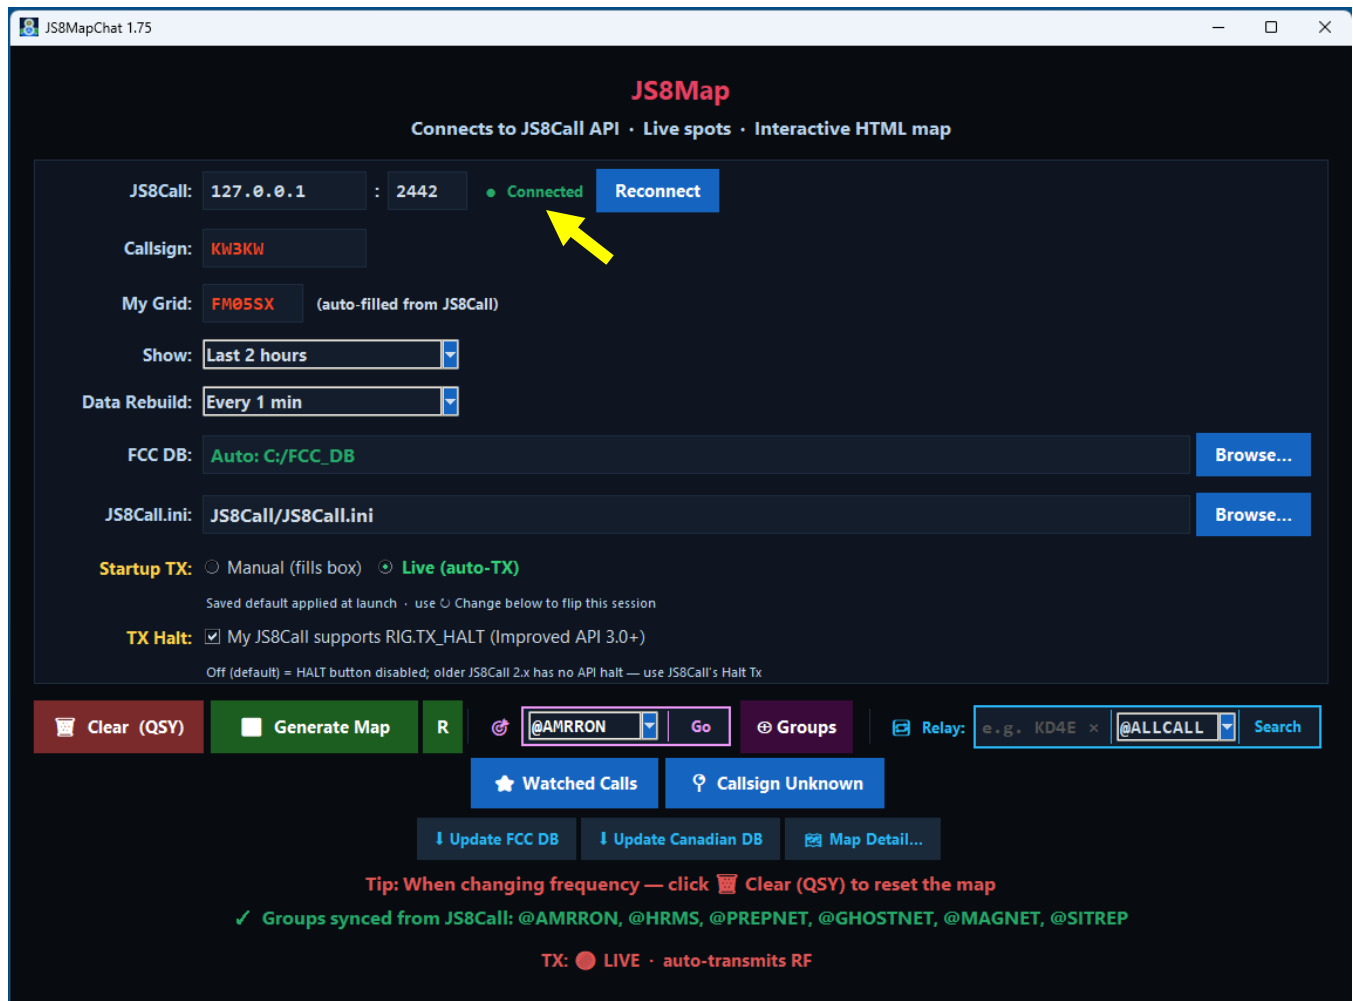

1 What this Guide Covers

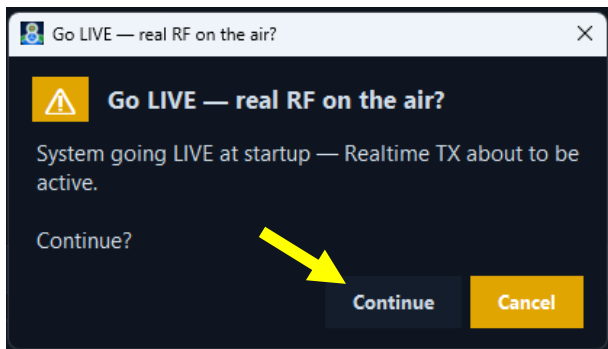

This guide explains what each control in JS8Map does. It assumes the program is already installed and talking to JS8Call. If it is not, work through the JS8Map Installation & First Run Guide first.

JS8Map does not replace JS8Call. It simply places all the JS8 received callsigns on a map. This allows you to see where each operator is located along with their FCC or Canadian DB info. A few short commands like Message,

It is a stand-alone app or if you want more functionality, download and install JS8FastChat to complete the full suite capabilities.

2 The Main Control Screen & Functions

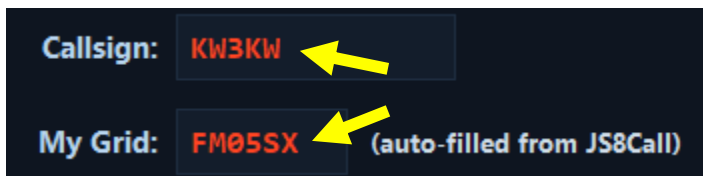

When the Live box on the main screen is checked, a reminder appears at startup that all functions, including TX, are live. Click Continue to proceed.

Features & Functions

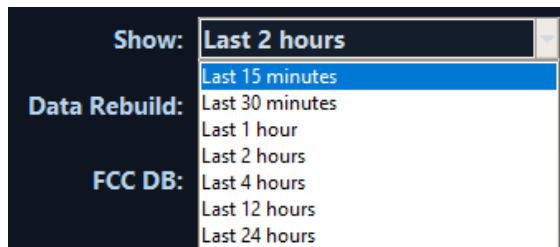

- At top shows connected to JS8Call

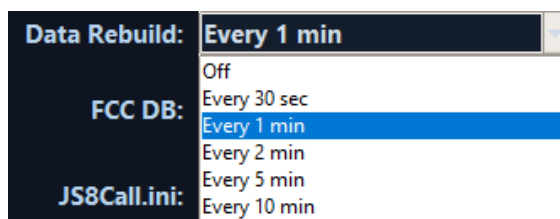

- Your callsign & Grid should be showing

- SHOW: Dropdown time options

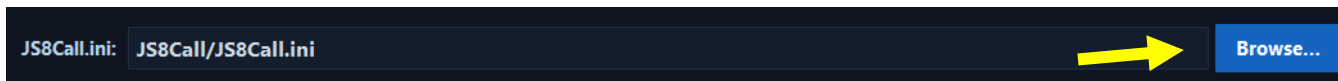

- Data Rebuild: Time to Rebuild

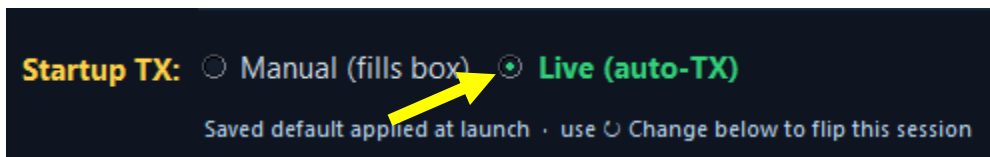

- FCC DB Location (Mapping) - Auto locates based on install setup

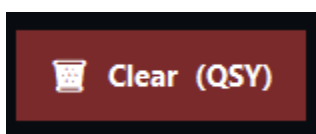

- JS8Call/JS8Call.ini Mapping – Auto fills if your setup in JS8Call is standard. If not, use the “Browse” button to map to the correct location.

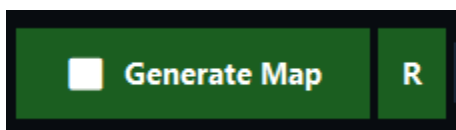

- Option to manually copy any commands to JS8Call – Copies command and you just paste (Ctrl + V) within JS8Call, or go real-time and Map will auto populate and send commands.

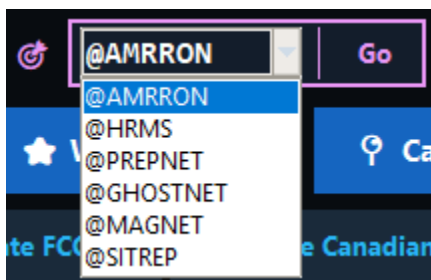

- Check which JS8Call version your using (different API's) to allow the HALT feature to work. Must have the JS8Call Improved 3.XX to use this feature.
- When changing frequencies, you must clear your list in JS8Call, click Clear Button and it will clear the map of the old frequency callsigns.

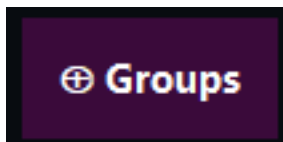

- When changing frequency, first clear your list in JS8Call. Next, click Clear (QSY) button. This will clear all traffic from the last frequency on bot the HTMP Map as well as FastChat screen.

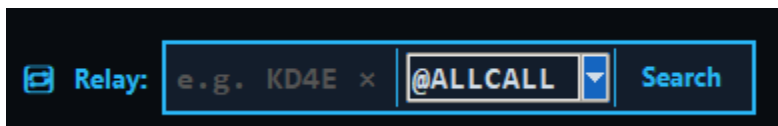

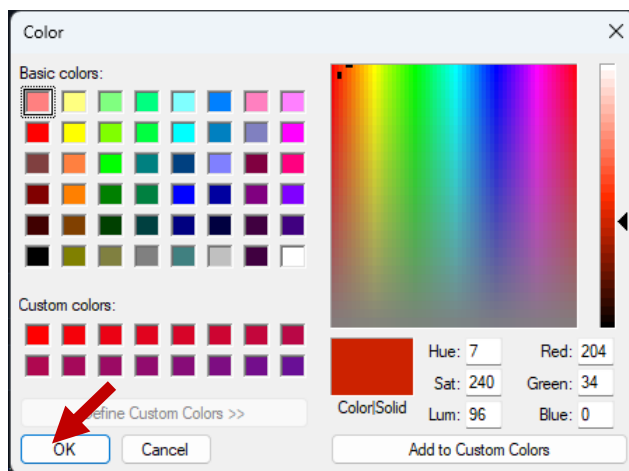

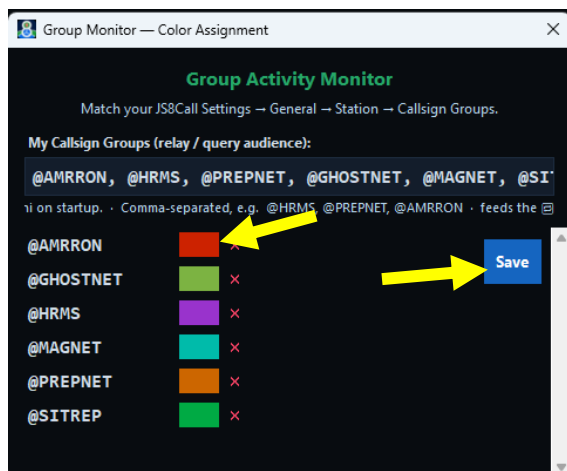

- To generate the map, click GENERATE MAP button. It will open a new HTML Map and within about 10 seconds, it will begin to populate the map.
- R button – if you **accidentally closed the HTML Map**, click the R (restore) to repopulate the map back to its last status.

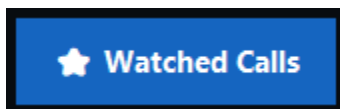

- To tag callsigns to a group that they have listed in JS8Call, select the group in the dropdown and click GO.
- It will color code their callsign box on the map to a specific assigned color. Great way to see what group members are on currently and their location.
- Most callsigns belong to more than one group so the first tag (color) will remain and NOT color over the first group tagging. New ones will show up with their assigned color

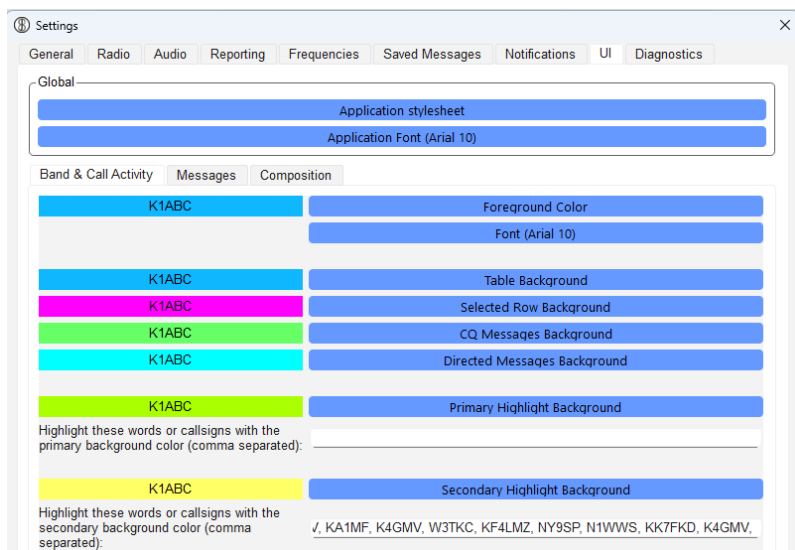

- You can assign a color to any and all groups you want to map.
- To change color, just click the group in the list and color selection screen will popup. Select the new color and click SAVE.

- **Relay Function** – see special handout for performing relays with animation.

- Watched Callsigns – Pulls over the list from JS8Call in Settings – UI Tab
- Glowing ring appears around all watched callsigns on the map

Callsign Unknown

- Callsign Unknown – creates a session only list of callsigns captured in JS8Call but not showing up in the FCC & Canadian DB. This will account for the difference in the number of showing callsigns (JS8) what is actually mapped.

Update FCC DB

Update Canadian DB

- To update the FCC & Canadian DB callsigns, just click the buttons. It will not take as long as the initial install. Very fast and nice to do on Mondays. FCC is updated every Sunday but the Canadian is updated once a year in September.

Map Detail...

- Map Detail – Since this is created for offline use, some may want a different map that requires online connection and a key to use the map. For most, just ignore this.

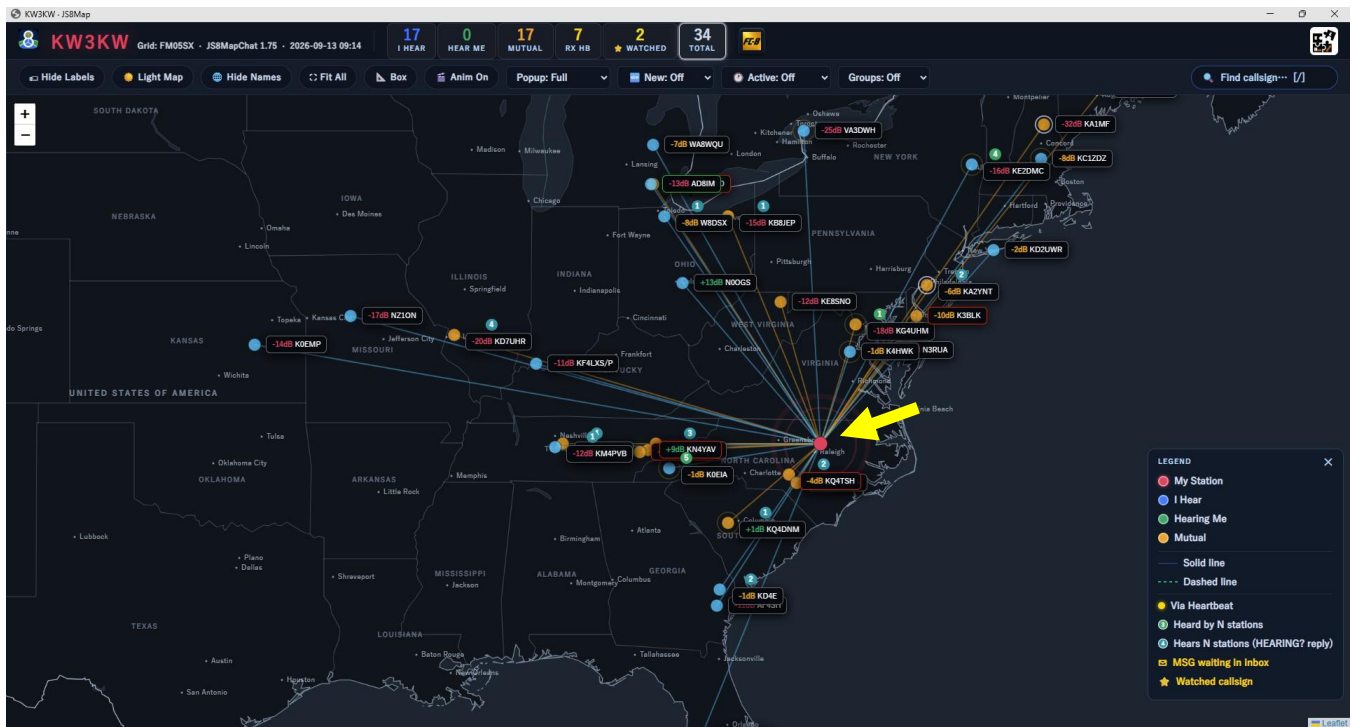

Tip: When changing frequency — click  Clear (QSY) to reset the map

✓ 10:03 — 33 on map (33 in DB, 32 no-grid) ·  16  17 · Hear you: K3BLK, K4KCF, K9BTR, KA1MF, KA2YNT, KB1EZZ... · HB: 7 · Rebuild: every 1 min + live

TX:  LIVE · auto-transmits RF

- Data stream information along with connection status.

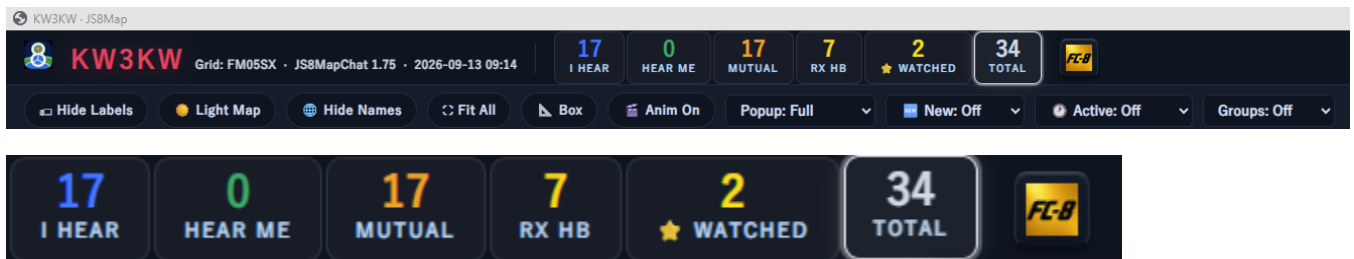

3 The HTML Map Screen

JS8Map HTML Page / Screen

4 The Header

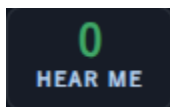

The header runs across the top of the HTML Map window and carries the controls you reach for most often, along with filters / sort functions to enable more focused views of all the callsigns. The large red circle / dot is your grid location.

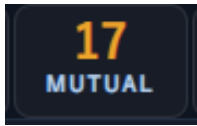

Top row of the header

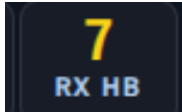

- I Hear filter button – I hear only

- Hear Me filter button – Hear me only (not very common, so expect zero more often than not).

- Mutual filter button – We both hear each other

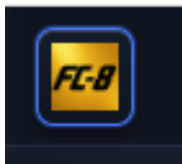

- RX HB filter button – received callsign from a heart beat call

- Watched button – shows only all the “watched callsigns” from the JS8Call settings – UI list.

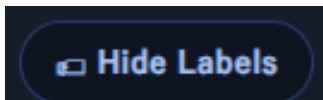

- TOTAL – total number of all JS8Call callsigns received. **To return to main screen, when using the filter buttons, click the TOTAL button.**

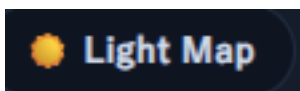

- FC-8 button – will pull forward the FastChat Screen. Great way to switch between the two apps IF you have the JS8FastChat installed and running.

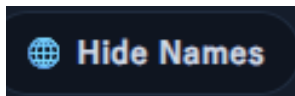

5 The Sub-Header

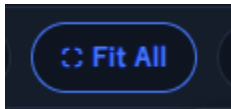

- Hide Labels

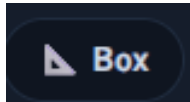

- Map Theme – Light or Dark

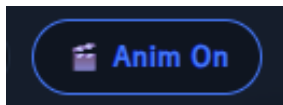

- Hide Names – Hides all country, state and city names from the map

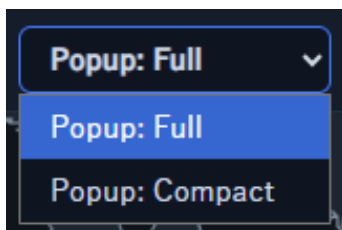

- Fit All – Fits all the callsigns into one single map view. Use the F Key for same function. Think of this as an “Escape Key” to restore the map to best fit view when resizing, moving or zooming in or out.

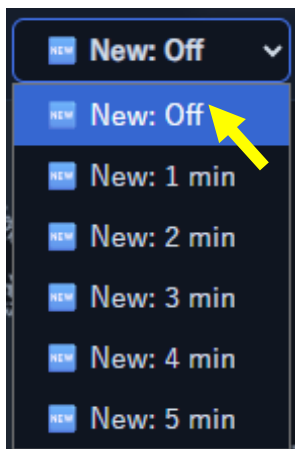

- Box – Draw a box to zoom in to a location for a tighter view of the map. Also, can Rt. Mouse Click and draw a box where you want to zoom in on.

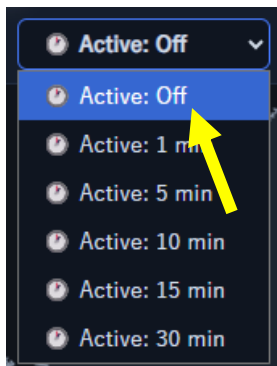

- Animation On Button – turns on the animation feature on the map when using the relay feature.

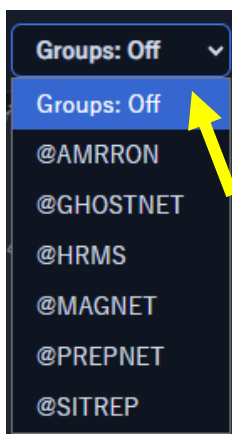

- Popup button: Full or Compact view of the callsign popup

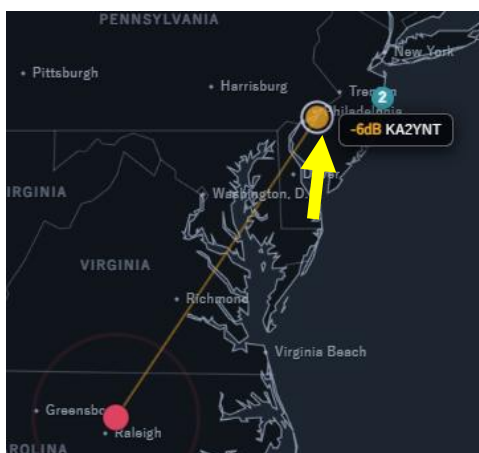

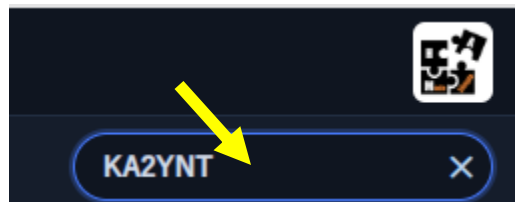

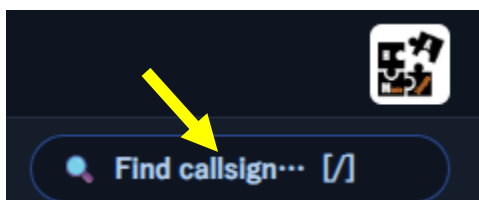

- New: button – shows only the newest added callsigns in 1 min. increments. First time showing up within JS8Call during your session.

- Active: button allows to sort only ACTIVE callsigns. Older callsigns that continue to stay active will show on the map based on the time selection from the dropdown.

- Groups: button allows to sort by groups IF they have been tagged by the Group SNR button on the main screen OR if the operator makes specific call to groups in JS8Call.

- Find callsign button – type in callsign to find on the map quickly. Map will only show this callsign. **To return to normal populated view, Click the X in the callsign lookup box.**

6 Callsign Popup Window

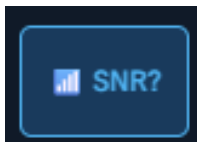

Callsign Popup Window – a lot of information in one single view

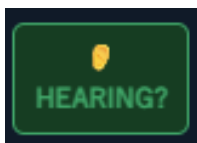

- Two views, Full or Compact for small screens, or when you just want the key info in a quick view.

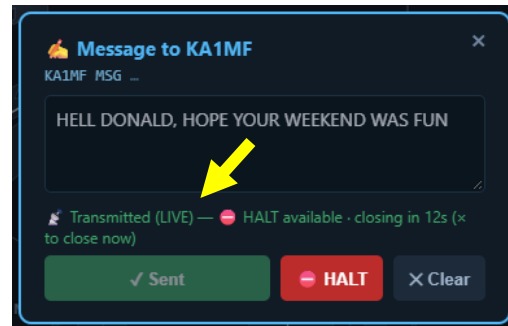

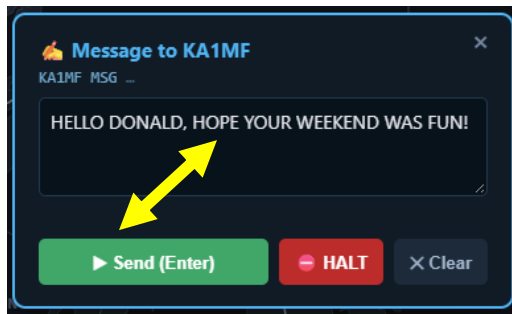

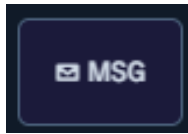

Fit button – to eliminate (not remove) foreign callsigns from pulling the map out to a large view, select the FIT and it won't use it when using the "Fit All" view option.

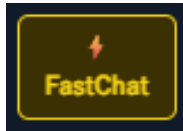

- SNR? button – auto sends JS8 the command with their callsign for an SNR? request.

- HEARING? button - – auto sends JS8 the command with their callsign for the HEARING? request – Will show last 4 heard callsigns in the bottom of the callsign popup window.
Note: Must close and reopen callsign popup window (refresh) to see new data.

- MSG button – popup message box appears, type in message and hit send or the Enter Key. Auto sends JS8 the command with their callsign along with the typed message.

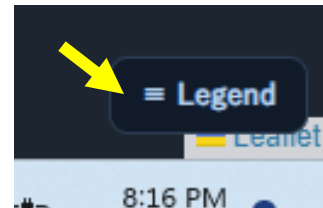

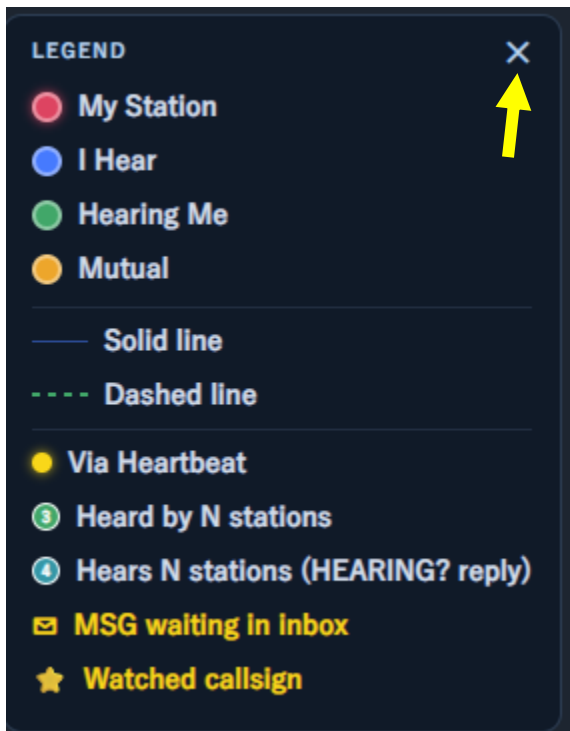

- FastChat button – opens the FastChat popup window for the selected callsign. Allows for the full feature app to do all the JS8 commands with a single click of the button. Note: greyed out unless the JS8FastChat app is open and connected to JS8. See FastChat Instructional Guide for more info.

- *JS8FastChat Callsign Popup Window*

7 The Legend – Color Code for Map

- To remove from screen view, Click the X in top right corner.
- To view again, click the Legend button in lower right corner of the map.

8 JS8Map Hot Keys

Key	What it does
F	Fit All — zooms to show every station
R	Refresh — asks JS8Map to pull from JS8Call and rebuild now
/	Jump to the Find callsign box
L	Labels on/off
D	Dark/light theme
1	Show all stations
2	Show stations I hear
3	Show mutual
4	Show via heartbeat
+ or =	Zoom in
-	Zoom out
